Sweepout Assembly & Roller Guide for Pharma & Flaconnage Containers

Dura Temp Corporation will be presenting its line of hot ware handling products for Pharmaceutical and Flaconnage containers at Glassman 2011 in Barcelona, Spain. This line of specialty products has been developed to improve the ware handling of smaller containers.

The Pharmaceutical and Flaconnage ware handling products are made with Dura Temp's proven DT-1 material, a silicone composite which was developed specifically for hot ware handling.

The Pharmaceutical/Flaconage sweepout assembly (pictured above) incorporates the quick-change concept from Dura Temp's standard line of sweepout assemblies. The sweepout pockets drop on a mounting bracket and can be changed with little or no down-time. These sweepout pockets are designed to handle a range of bottle diameters. Custom-designed pockets are also available.

New to this product line is the mini roller bottle guide. This guide consists of free rotation rollers mounted on an aluminum channel. The roller design presents 360° of contact surface, which increases the life of the guide.

We invite you to visit our stand, G7, at Glassman Europe to see our latest product developments!
