

Introducing the Very Latest Innovation in Hot Ware Handling - HW Series Product Line

April 4, 2011

The HW Series

It's what's inside that counts

Dura Temp's new hybrid ware handling solution, offering longer wear life and higher temperature capabilities.

Dura Temp's new Hybrid Product, offered as the HW Series, proves that sometimes it's what's on the inside that really counts!

Dura Temp has combined its proven (and recently improved) DT-2 material with a new high-temperature, lightweight, carbon composite to offer the latest innovation in hot ware handling. This combination of materials gives glassmakers the option to use ware handling products with even longer wear life and higher temperature capabilities.

The HW Series has a number of advantages over other ware handling materials:

- **Structural integrity at extremely high temperatures** - The HW Series can withstand temperatures which cause premature failure of other carbon-based and polyimide materials.
- **Longer wear life** - The wear life of the HW Series is significantly longer than many other ware handling materials.

- **Non-absorbent and non-checking** - Unlike standard graphite, carbon-fiber-carbon, and other materials which threaten to absorb production oils and lubricants and cause thermal shocks (checks) to the glass, the HW Series is non-absorbent and does not pose this threat.
- **Easy to clean** - **NO** special chemical cleaning is required to remove production oils and lubricants from the HW Series products as can be needed for the stainless steel braid products.
- **Positive attachment** - The HW Series is a molded composite material which eliminates the need for welding as is required for most stainless steel braid products.
- **Quick-change approach** - The HW Series incorporates Dura Temp's quick-change concept which reduces down time and increases productivity.
- **Reduced inventory level** - The HW Series pockets are interchangeable with Dura Temp's standard line of sweepout and transfer pockets so fewer spare parts are needed.

All of these benefits lead to one question...

what's inside your ware handling products?

We invite you to visit our stand, G7, at Glassman Europe to see the latest innovation in hot ware handling!

Visit Dura Temp at Glassman Europe 2011 in Stand G7!
